

DECORATIVE CONTAINER**Abstract of the Disclosure**

5 A decorative container is described for displaying items in internal
cavities where the container includes an inner container positioned within an outer
container defining a hollow region therebetween. The outer container is at least
partially transparent. The container also includes a removable member allowing access
to the hollow region. A plurality of removable dividers extend radially from the inner
10 container to the outer container in the hollow region, defining a plurality of hollow
cavities within the hollow region. Also a decorative lid is described that may be used
with or without the decorative container defining a hollow cavity for displaying
decorative objects. The decorative lid includes a removable lid access member for
accessing the hollow cavity.
